TITLE : ANTIHYPERLIPIDEMIC AGENT

ABSTRACT : PURPOSE: To obtain an antihyperlipidemic agent exhibiting remarkably increased medicinal effect and decreased side action by combining an antihyperlipidemic agent based on a squalene epoxidase inhibiting action with another hypolipidemic agent based on the other activity mechanism.

CONSTITUTION: The objective antihyperlipidemic agent is a combination of (A) an antihyperlipidemic agent based on a squalene epoxidase inhibiting action (e.g. (E)-N-ethyl-N-(6,6-dimethyl-2-hepten-4-ynyl)-3-[4-(3-thienyl)-2-thienylmethoxy]benzylamine hydrochloride) and (B) another hypolipidemic agent based on the other activity mechanism (e.g. HMG-CoA reductase inhibiting agent, nicotinic acid-type agent, clofibrate-type agent, anion exchange resin or probucol-type agent). The combination is useful for the treatment and/or prevention of hypercholesterolemia, hyperlipidemia or arteriosclerosis.
